PROFILE

Hi, I'm Per, a **curious software craftsman** with 20+ years of turning ambitious ideas into **software people love to use**. I'm a **full-stack developer with a frontend heart**: the visuals, the interactions, and the details that make a product feel effortless. That's where I do my best work.

I've built software for everything from **in-flight entertainment at 35,000 feet** to **streaming apps for HBO**, airline Wi-Fi platforms, banking systems and mobile apps for Sony. My home turf is **React, TypeScript and Node** on the web, and **Kotlin with Jetpack Compose** on Android, on top of a solid Java and native mobile background. I care deeply about **frontend architecture and developer experience**: codebases that are still a joy to work in long after the first release.

I'm at my best in a team. I love establishing **pragmatic agile practices**, coaching developers, and creating the conditions where **people grow and teams ship**. I put **AI to work where it makes sense**, making teams and workflows more efficient without losing the craft. Whatever the stack, my goal stays the same: software with the right mix of **quality, robustness and ease of use**, and **maximum value for the end-user** and the business.
